halo

WEBSITE · QUIET LIGHT · SCREEN PACK & HANDOFF

The real product, shown truthfully.

Twelve pages built as production HTML, rendered at seven widths in light and dark, with the motion storyboard, screenshot map, design kit, final English copy and implementation handoff.

Route A · Quiet Light · English only · built against HaloWeb 0c4a9953, Halo Android 4f3c333e, HaloLinux f975c97d, Brand Book v3.0

01 — WHAT'S IN THIS PACK

Designed in the browser, so it's already built.

Decisions applied

- Route A, Quiet Light.
- Generated photos, simulated shorts and the design-board gallery removed.
- Price sentence as approved.
- Kids Mode labelled In development everywhere, with no screenshots until a public build has it.
- No licence yet, so copy says “Source code on GitHub”, not “open source”.

Deliverables

- 12 pages + a living design kit, as static HTML/CSS/JS.
- 156 renders: 360–1920 px, light and dark, long copy, no JS, 200 % zoom.
- Motion storyboard (12 effects + retired assets).
- Screenshot map, 21 open slots, release gate.
- 809 keyed English strings, tokens.json, IMPLEMENTATION.md.

Checked

- 0 automated WCAG 2.2 AA issues on all pages, light and dark, 390 and 1440 px.
- No horizontal scroll from 320 to 1920 px, at 200 % text or without JS.
- Home first view: about 21 KB of HTML, CSS and JS (gzipped).
- Every interaction tested: journey, Keep/Discard, ladder, voice states, checklist, feedback draft.

14 — RESPONSIVE

Re-composed at every width, not shrunk.

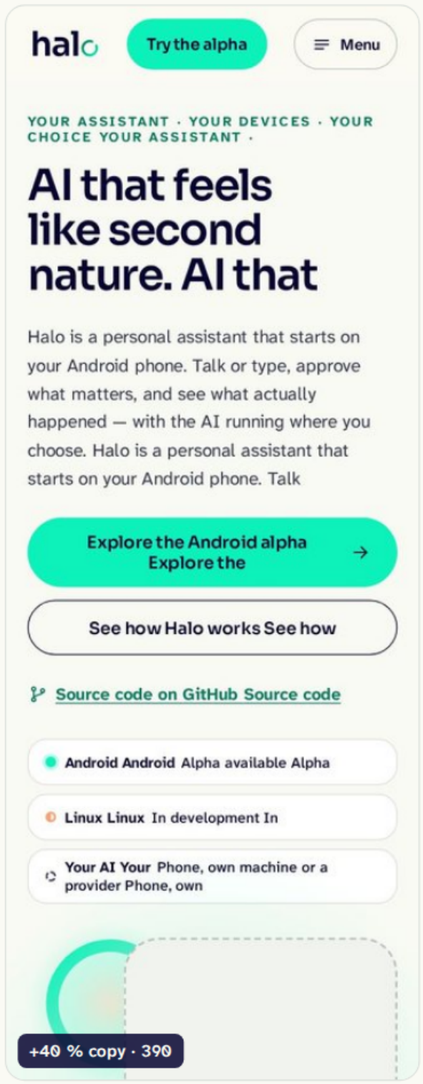

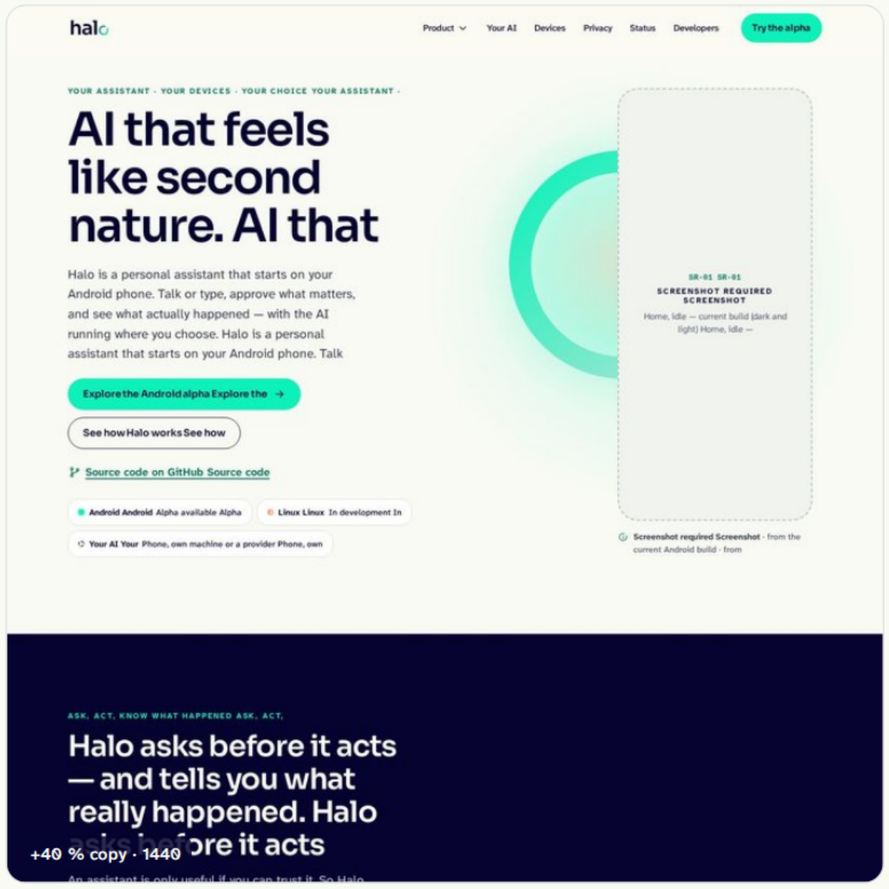

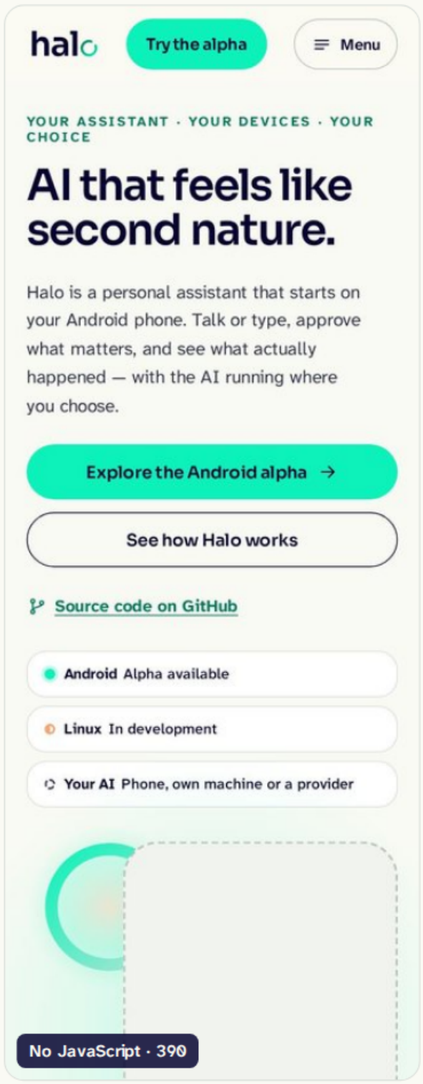

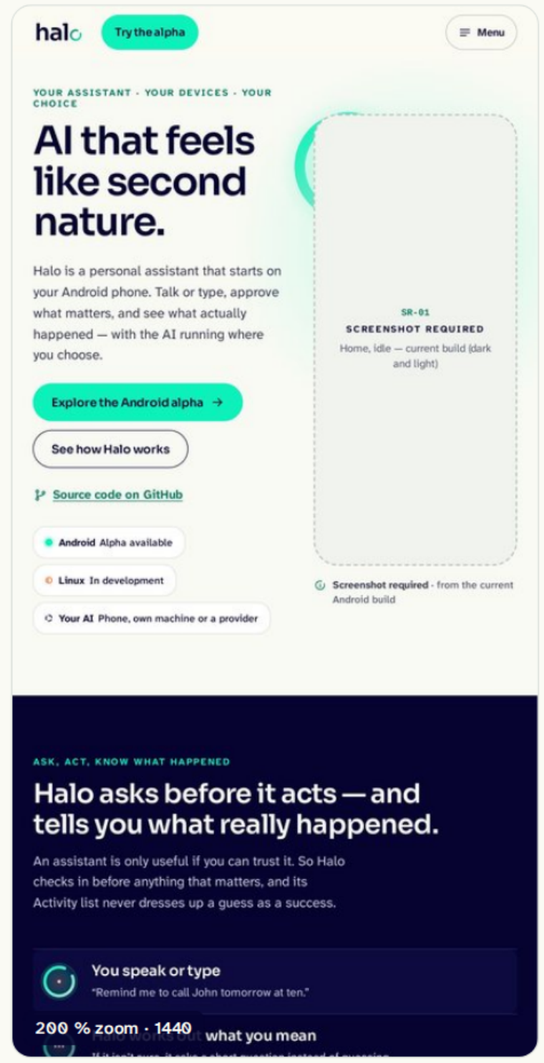

On phones the headline, both buttons and the first capture come before any decoration. The menu is a full-height sheet with 56 px rows that works without JavaScript; the header also switches to it whenever the inline navigation wouldn't fit.

Long copy, no JavaScript, 200 % zoom.

The long-copy renders pad every English string by 40 % to simulate longer languages. They aren't translations. Without JavaScript every sequence shows its final state, the AI selector still works, and the alpha form explains how to email instead.

Every effect has a trigger, an end and a still.

ID	COMPONENT · SOURCE	DECISION	TRIGGER · TIMING	FINAL STATE	REDUCED MOTION / NO JS
M01	**Hero · Open Ring entrance (Home)** assets/brand/lottie/halo_hero_ring_intro_{theme}.json → frames 0–60, then halo_orb_idle.svg	Rework (was: 2 s intro + infinite loop)	First view of Home, once per browser session (sessionStorage) 2.0 s (60 f @ 30 fps), then 240 ms crossfade · Lottie timing; crossfade ease-standard	Static canonical ring (gap 45°, rounded ends) — holds forever	Static SVG from first paint; Lottie never loads
M02	**Ask → act → know · journey stepper (Home, How it works)** assets/brand/orb/lottie/halo_orb_{listening,thinking,approval_required,acting,waiting}.json	Reuse	Visitor presses a step, or 'Play the five steps' Each ring plays once (2–4 s); auto-play advances every 2.6 s and stops after step 5 · Lottie native; figure swap instant	Step 5 = WAITING ring + the real 'effect not verified' capture — never SUCCESS	All steps and all figures visible as a list; no auto-play
M03	**Outcome states legend** icons.svg (task, approval, act, check, failure, unverified)	Reuse (static)	— — · —	Static	Same
M04	**Canvas draft · Keep / Discard sample (Workspace)** DOM cards + SVG link; dashed draft styling (Lottie halo_fx_draft_drawon available for the outline)	New (DOM) + Reuse	Keep or Discard pressed 420 ms · ease-out (.2,.7,.2,1)	Saved state appears ONLY after Keep; never before	Draft shown as dashed with buttons disabled and a 'Sample' label
M05	**Voice states (Home band, Voice page)** halo_orb_{listening,capturing_voice,speaking,stopped}.json	Reuse	'Show the four states' pressed (Voice); Listening ring plays once when visible (Home) 2.2 s per state, max 2 loops while active, then holds · Lottie native	All four cards static, none highlighted	Four static stills with text
M06	**Learning ladder (Workspace Study, Kids homework)** DOM rungs; optional halo_fx_learn_advance_{theme}.json on the last rung	New (DOM) + Reuse	'Next step' pressed 240 ms border/fill change · ease-standard	Current rung outlined (Deep Mint / Apricot in Kids); reached rungs solid; others dashed	Full ladder visible as an ordered list

Finite, paused off-screen, never decoration.

ID	COMPONENT · SOURCE	DECISION	TRIGGER · TIMING	FINAL STATE	REDUCED MOTION / NO JS
M07	**Kids ring (Home Kids teaser, Kids page)** assets/brand/kids/lottie/halo_kids_orb_idle_{theme}.json + kids SVG stills	Reuse	Comes into view (40 %) one play (≈4 s) · Lottie native	Kids idle still (warm ring)	Still
M08	**Host diagram (Devices)** Inline SVG, CSS stroke-dashoffset	Rework (replaces halo_near_to_far / pairing_signal)	Diagram 35 % visible, once 1.6 s · ease-out	Dashed 'planned' paths at rest; 'PRIVATE SYNC · PLANNED' label always visible	Paths static from first paint
M09	**Presence studio (Design page)** 12 orb Lotties + stills	Reuse	Each ring plays once when it scrolls into view 2–4 s · Lottie native	Still frames	Stills
M10	**Section reveal** CSS (.reveal)	Reuse (halo-fx reveal, simplified)	Section enters viewport (–8 % margin) 600 ms · ease-out	Fully visible	Always visible; applied only after JS is ready, so content never stays hidden
M11	**Header** CSS	New	Page scrolls > 8 px 160 ms · ease-standard	Hairline under the header	Same
M12	**Background behaviour (all motion)** site.js	New	Tab hidden / element off-screen — · —	lottie.freeze() in background tabs; off-screen rings pause	—

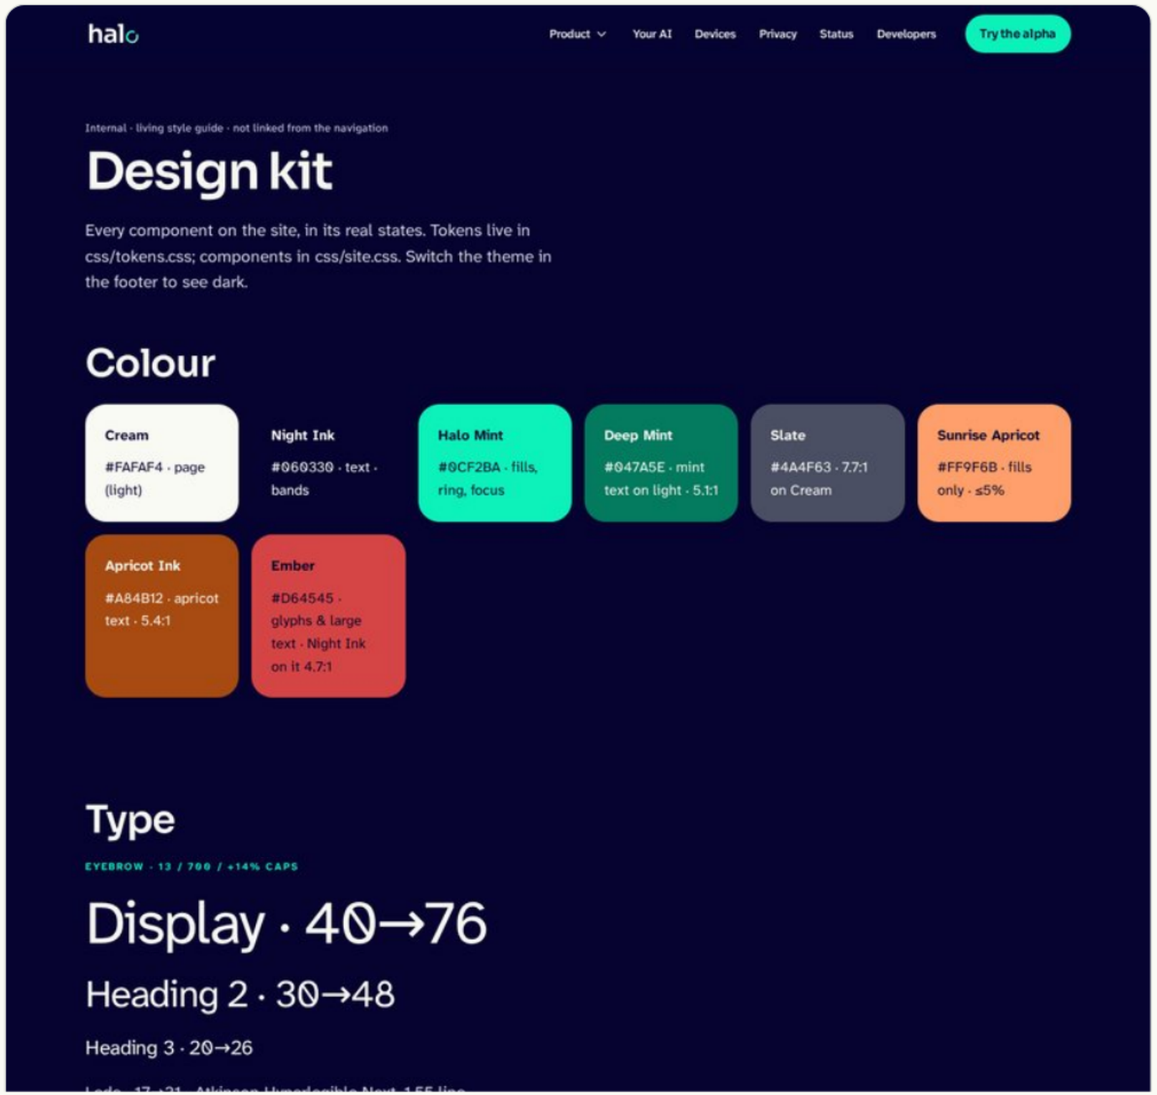

17 — SCREENSHOT MAP

Where each real capture goes, and what's still missing.

SLOT	PAGE · SECTION	CURRENT ASSET	CROP · ASPECT	STATUS
SR-01	Home · hero (right column; mobile under CTAs)	— (home.jpg is the interim real capture)	Full 1080×2400, no crop. Desktop 20 rem wide (~320 px); mobile 74 % of width	**REQUIRED (P0)**

One component set, two themes.

Living style guide at /kit (noindex). Tokens in css/tokens.css and tokens.json; components in css/site.css. Captures and slots, status chips, rings, buttons, outcomes and inputs shown in their real states.

19 — GAPS & OWNER REQUESTS

What still has to be true before publishing.

	TOPIC	STATUS	NEEDED
P0	**Licence**	Still no LICENSE in Halo, HaloLinux or HaloWeb. Site says “Source code on GitHub” and Developers asks people to ask before reusing code.	Choose and commit a licence; then I switch copy to “open source” (4 strings).
P0	**Real captures**	21 ‘Screenshot required’ slots remain (SR list). The release gate (build_pages.py --check) fails until they’re filled.	Capture per rules; drop files into assets/screens/real/ and swap {{SLOT}} → {{SHOT}}.
P0	**Hero capture**	Hero uses an SR-01 slot; home.jpg is the interim real capture used further down.	SR-01 dark + light from the current build.
P1	**Lowercase in prose**	Copy uses “Halo” in sentences; wordmark is lowercase.	Confirm (recommended) or ask for lowercase everywhere.
P1	**Voice pack naming**	Supertonic 3, Kokoro 1.1, Whisper, Silero named only inside a collapsed ‘for the curious’ note.	Confirm naming is allowed and licences permit it.
P1	**Provider list**	No connector is named as working.	List connectors verified on device; I’ll add them to Your AI.
P1	**HaloLinux wording**	Devices says the newest batch ‘was written but not yet built, tested or tried on a device as a whole’.	Confirm, or tell me when a tested build exists.
P1	**Google components**	Privacy mentions ‘some Android features come from Google’s own system services’.	Confirm wording for the ML Kit document scanner and Wear components.
P1	**OG images**	assets/og/*.png still carry the old headline.	Regenerate from the new hero copy (no photo) — I can do this in the next round.
P2	**LV / RU**	New pages are English only; copy/en.json carries 700+ keys for the translation pass.	Hide the old language switch until translated (done in this build).
P2	**Feedback address**	Personal Gmail stays public on the Alpha page.	Confirm.
P2	**Test-kit image**	01_study_basil_observation.png origin unconfirmed.	Confirm real/authored, or replace.

From this pack to the live site.

01 **Copy the site folder into HaloWeb** following IMPLEMENTATION.md, and delete the retired assets listed there.

02 **Add a licence** to the three repositories, then switch four strings to “open source”.

03 **Capture the P0 screenshots** (SR-01, 02, 03, 04, 06, 07, 11, 13, 16, 21) and swap each slot for a real capture.

04 **Run the release gate:** `python tools/build_pages.py --check` passes only when no slot is left.

05 **Regenerate the Open Graph cards** with the new headline.

06 **Translate** from copy/en.json once the English is approved.
